🧩 Core prerequisites

Dependency Purpose Install tip

- **Python 3.10** + Required runtime for LeRobot Installed automatically if you use Anaconda or Miniforge

- **Conda / Miniforge / Anaconda** Manages Python environments Download Miniforge or **Anaconda**

- **Git** To clone the LeRobot repository https://git-scm.com/downloads

- **ffmpeg** For video handling (datasets, visualization) conda install -c conda-forge ffmpeg
- **CMake** + Build Tools Needed if any packages must compile native code (PyAV, etc.)
- Windows: install Build Tools for **Visual Studio** (C++). macOS/Linux: cmake via package manager
- **PyTorch 2.2** + Deep-learning engine install via conda (CPU or GPU version)
- LeRobot The robotics framework itself **pip install lerobot or pip install -e** . from source
